Advantage of Melamine

NSF Certification link: <http://www.nsf.org/>
National Sanitation Foundation

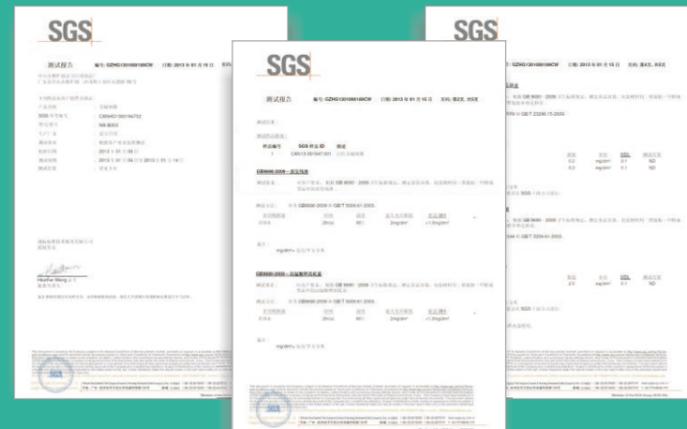

Melamine is a kind of synthetic resin, can be hardened and shaped after heating with good heat resistance. Melamine is one of a wide range of plastic materials.

Non-toxic and tasteless, light weight, impact resistance, not easy to deform, low thermal conductivity, not easy to break.

JB company's products have passed SGS food safety certification, NSF National Public Health Certification, please feel free to use.

warm prompt:

All sizes and shapes have 2 color options, which are: Green/gray spray point, yellow/gray spray point.

Green/gray spray points

Yellow/gray spray spots

ANCIENT ROME SERIES

*Food is the source of life. It is also the story of the people.
In the Eastern culture, which emphasizes the aesthetics of life.
A fine meal, the food is truly. They are the aesthetic bridge linking people and life.*

The exquisite tableware, gives the human taste pleasing to the eye feeling, receives the new and changeable taste journey, also is by the vigor visual seasoning

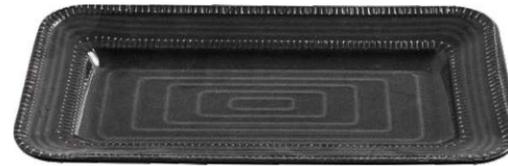

ANCIENT ROME SERIES

In the Eastern context the food apparatus was originally even higher than the food itself. Beauty, originally from the image, from the image. The aesthetics involved in food are not just about the taste of food. It is also in the shape of the food vessel.

THE BEAUTY OF TABLEWARE

In fact, in the Oriental context
 Food utensils are even higher than food itself
 Beauty originates from pictograph and image at first
 Aesthetics in food
 It's not just about the taste of food
 It also lies in the shape of food utensils

TANG DYNASTY FLOWER DESIGN

Take the pattern of Tang grass in the prosperous times.
Smooth and natural lines, round as jade.
The shape is beautiful and elegant, simple and light.
Appreciate its beauty and smell its fragrance.

IRON BRACKET

APPLICATION SCOPE:

It is very suitable for storing food;
Used in food preparation;
Used in the display of buffet food;
Used for the delivery of food to the meeting.

CHARACTERISTIC:

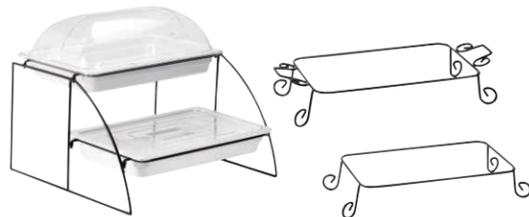

Production with imported new materials;
American Standard Design;
Low heat conduction, not easy to be damaged, easy to stack and deliver;
It is equipped with rich combination accessories, which makes the display more flexible and free;
The perfect combination of melamine and PC material makes it more unique and can be used freely
Match.

Can be matched with Jiabao series meal cover

Supporting wire rack

DISPLAY PANEL

Half arc shape, large space, round halo, easy to clean
Abandon triviality and enjoy simple life.

One shelf, two assemblies

MELAMINE TABLEWARE SAFETY

A product loved all over the world for many years

Born in 1938, melamine cutlery, with a history of more than 70 years, it has always been one of the world's favorite materials, and its safety has been recognized by health professional organizations around the world. Its appearance is like ceramic, resistant to falling, not easy to break, beautiful and easy to clean. It is often used in daily necessities, children's tableware, dress ware, widely used in families, schools, restaurants and department stores. It is a safe and convenient tableware.

The safety of melamine tableware is recognized as a safe product all over the world

Recently, more and more people are using melamine tableware. Some consumers or new media think that it will release formaldehyde and melamine, causing safety concerns. In Japan, the United States, Europe and other countries, there are set limit values and safety tests for formaldehyde and melamine, which prove that the safety of melamine is safe. Health specialized agencies in many countries guarantee the safety of melamine.

Even after a while security remains undiminished

Even if the surface is slightly damaged after long-term use, the test results will not dissolve melamine and formaldehyde as the new product, so the safety is still no problem and can be used at ease. However, whether it is melamine tableware or tableware made of other materials, it still has a useful life. It is necessary to replace tableware according to the way of use, cleaning and storage.

Strict testing standards and tolerable daily intake in various countries

Europe, America, Japan and other countries in the world have set hygiene standards for American tableware, and carry out food hygiene and safety monitoring according to this standard. In addition, according to the expert meeting of the food and agriculture organization of the world health organization, melamine is currently classified as Group 3, which means that it is not carcinogenic to human beings, and its tolerable daily intake (TDI) is set at 0.2mg/kg bw/day. The U.S. FDA sets the standard at 0.063mg/kg BW /day.

Strict testing standards and tolerable daily intake in various countries

The national standard for testing melamine is to place the melamine dissolving value within 2.5 PPM after 30 minutes at 95°C at 4% acetic acid. This is more stringent than the actual conditions of use, and under such standards, there is still no formaldehyde and melamine found in Gabor's plate products, so it is more unlikely to dissolve toxic substances in ordinary use.

WORLDWIDE MELAMINE TABLEWARE FORMALDEHYDE LIMIT

Country	China 	Japan 	Britain 	Germany 	America 
Resin	(Melamine)	(Phenol) (urea) (Melamine)	(Melamine)	(Melamine)	(Melamine)
Precipitation conditions					
Eluate	Distilled water	Distilled water	A) distilled water B) 3% acetic acid C) 10% ethanol	A) distilled water B) 3% acetic acid C) 10% ethanol	There are no special regulations on tableware. There are regulations on raw material prescription.
Temperature & Time	Let stand at 95°C for 30 minutes	Let stand for 30 minutes at 60°C	Let stand for 30 minutes at 80°C	Let stand for 30 minutes at 80°C	Melamine 1 mol and Formaldehyde below 3 mg/l. By inverting in an aqueous solution should be made.
Tolerance limit	Not detected (inspection limit: 4ppm)	Not detected (inspection limit: 4ppm)	3 µg/ml (3ppm)	3 µg/ml (3ppm)	
Inspection methods	Acetyl acetone method Note 1	Acetyl acetone method Note 1	Acetyl acetone method Note 1	Acetyl acetone method Note 1	

Note 1: acetyl acetone method is the most appropriate method to check the degree of formaldehyde pouring, health institutions in various countries with a limit of 4ppm standard to do the test. Parts per million is a part of a million. One of the points.

WORLDWIDE MELAMINE TABLEWARE FORMALDEHYDE LIMIT

Country	China 	Japan 	Britain 	EU 
Resin	(Melamine)	(Melamine)	(Melamine)	(Melamine)
Precipitation conditions				
Eluate	4% acetic acid	4% acetic acid	3% acetic acid	3% acetic acid
Temperature & Time	Let stand at 95°C for 30 minutes	Let stand at 95°C for 30 minutes	Let stand at 70°C for 2 hours	Let stand at 70°C for 2 hours
Tolerance limit	Did not detect (Check limit: 2.5 PPM)	Did not detect (Check limit: 0.5 PPM)	Did not detect (Check limit: 2.5 PPM)	Did not detect (Check limit: 0.5 PPM)
Inspection methods	Japanese Health Test Law	Japanese Health Test Law	Note 2	Note 2

Note 2: MTT materials are afraid of acid and heat, which is a very strict test for MTT. If prolonged or repeated testing, even the poor quality of the test products will occur corrosion cavity phenomenon.

Formaldehyde is ubiquitous in our life

Actually also contains formaldehyde in foods in our daily life, daily in the natural food to eat fish, vegetables, fruits, meat, grains, and then using melamine tableware may also release several times, Japan's national health laboratory report points out that formaldehyde contained the highest apple has 17 PPM, 15 PPM, tomatoes, eggs have 5 PPM, Even milk contains 1.7 PPM, and formaldehyde is easily dissolved in water, oxidized into formic acid and discharged out of the body, so it does not accumulate in the body and has no impact on health.

The ingredients are also important

Garbomei plate products are made of advanced 5A raw materials -100% American plate resin (scientific name: formaldehyde melamine resin), its characteristics are very obvious, non-toxic and tasteless, and light heat preservation, with ceramic luster, but more than ceramic collision resistance, not easy to break, and beautiful appearance, temperature range between -20°C to 120°C. The products have successively passed the national QS quality certification, and obtained NSF American health and safety certification and EU SGS food health and safety certification.

Melamine is excreted from the body by water

Some scholars research, points out that the consumption of toxic melamine tableware hot soup, in the urine concentrations of melamine in 12 hours have obvious rise, but most of the industrial chemical melamine in 24 to 48 hours can follow the metabolic way of urine excretion body outside, at present in view of the long-term use of melamine tableware human health risk more research remains to be proved. Gao's team calculated that a bowl of noodle soup containing 700 milliliters of melamine, if the amount of melamine dissolved in a bowl of noodle soup is 0.75 mg, 60 kg adults only eat this bowl a day, the daily intake per kg per person is 0.0125 mg, it would take five bowls of noodle soup to exceed the recommended daily intake in the United States (0.063 mg). If the level of melamine and similar compounds in products can be controlled under 2.5mg/kg, there is no need for consumers to panic and fear this small dose. In addition, Before purchasing Melamine tableware, it should be confirmed that there is a clear and complete label, the heat resisting temperature of the tableware and whether the raw materials are A5 melamine material, to avoid brightly colored melamine tableware with exciting odor, so as to reduce the risk of dissolving toxic substances from melamine tableware and provide consumers with a "safe eating" dining environment.

Melamine Cleaning & Maintenance

1

Leftover vegetables placed for a long time will make the color of food easy to stain on the tableware, affecting the use of tableware, so after dinner should be promptly removed from the residual vegetables!

2

Soak the tableware in warm water with neutral detergent at 30°C~40°C for 20~30 minutes before subsequent cleaning process. If there is difficult to wash food residue can be soaked in 50°C water after cleaning.

MACHINE WASH

3

Place the dishwashing dryer and add neutral detergent to set the water temperature at 60°C ~70°C for cleaning.

4

Keep the temperature between 70 ° C and 85 ° C dry, and set the running time to about 30 minutes. Remember to confirm regularly detergent concentration, water pressure, water, water temperature is suitable for cleaning the United States Tableware.

5

Disinfection storage: When the disinfection cabinet is used, it is generally set at 80°C~85°C for 20~30 minutes. Place the tableware so that there is a certain space between the tableware, so that the tableware can dry quickly on average. The temperature of the hot air outlet of the disinfection cabinet will be relatively high. Please try not to place the tableware in the outlet to avoid damaging the tableware. Please do not shorten the service life of tableware caused by repeated heating and disinfection.

HAND WASH

3

Clean with napa cloth or sponge. Reduce damage to cutlery when cleaning.

4

Rinse the cleanser thoroughly to avoid detergent residue. cleanThe incompleteness of agent washing is also one of the reasons for the short service life of the Mei-nai tableware.

Melamine life & Precautions

In fact, there is a fixed number of years of cutlery, even if it is originally high-quality, but after a long time, the material of cutlery is aging. Generally, chopsticks, spoons, forks, cleaning agents and bleach are used to clean the cutlery. It is possible to produce scratches, missing angles and cracks when placing the cutlery.

So how many times does the table ware get used?

How many years will it last? Roughly 1,000 times. If it is used as a nutritious school lunchware, it can be used 180 to 200 times a year for about five to six years. (in the case of dishwashers and storage cabinets), regular replacement is required according to the annual rate of breakage, and please consider the number of years of use in terms of the state of handling, the way the cutlery is cleaned, and the damage caused by stacking of the cutlery.

When using cutlery, be careful

1. Do not microwave or cook food.
2. Less hot and acidic food should be served on cutlery. Spoons, spoons and chopsticks should not be cooked in hot soup or wok.
3. The table ware can not be cleaned with melon cloth or steel brush to avoid damaging the surface and leaving scratches. It should be cleaned with sponge or cloth after soaking, which can prolong the service life.
4. As long as the cutlery is scratched or damaged, it cannot be used, or the cutlery should be updated due to the aging of the material after years of use.
5. Avoid buying melamine with irritating odor and prevent buying secondary products with formaldehyde residue.
6. Buy high-quality, branded melamine tableware, not overly cheap or irritating taste melamine tableware. (May have formaldehyde residue)

Instructions

Precautions for Use

Do not use the fire near the fire.

Do not steam or keep warm.

Do not use in microwave or oven.

Avoid hot oils and chemicals.

Clean up a little

- Choose neutral detergent when cleaning, avoiding erosion by acidic or alkaline detergent.
- After tableware cleaning, disinfection and sterilization, should avoid the use of ultraviolet sterilization.
- Anyway, don't use chlorine bleach.
- Soaking at high temperature for a long time damages the surface, so soak in warm water at 30~40 ° C for about 15~20 minutes. If need to boil disinfection, should shorten to the minimum time (about 1~2 minutes), avoid long time boiling.
